EDUCATION

MSc. in Computing Science - Software, Web and Cloud **Aug 2025 - Present**

Tampere University

- 100% scholarship for two-years studies
- Teaching Assistant: COMP.SE.110 - Software Design
- GPA: 4.64/5.00

BSc. in Science and Engineering - Computing and Electrical Engineering - Software Development Major **Aug 2022 - May 2025**

Tampere University

- 100% scholarship for three-years studies
- Teaching Assistant: DATA.ML.100 - Introduction to Pattern Recognition and Machine Learning
- Relevant Coursework (Grade: 5/5): Data Structures & Algorithms 1, Database Basics, Software Engineering Project 1 & 2, Introduction to Fullstack Development

PROFESSIONAL EXPERIENCE

Software Engineer Collaborator (Front-End / AI Integration) - Solita **Aug 2025 - Dec 2025**

- Built and maintained the UI for a Jira plugin using **Forge**, reducing ambiguity in bug reports for end users.
- Spearheaded a prompt-splitting architecture that reduced AI response latency by ~30% across issue-creation requests.
- Enhanced reporting quality by integrating **OpenAI** (and fallback LLMs) to surface clarity checks, summary suggestions, and priority validation inline.
- Owned and self-managed front-end integration of the LLM pipeline via a **Trello Kanban** workflow, ensuring AI suggestions reached users without disrupting Jira flows.

Tech stacks: React, TypeScript, Jira API, OpenAI API, Forge App

FEATURED PROJECTS

SnackOverFlow - AI Harness Logistics Solution | Junction 2025 **November 2025**

- Led a four-member cross-functional team through a 48-hour hackathon sprint, owning task breakdown, prioritization, and delivery under tight deadlines.
- Spearheaded the product direction for an AI-powered retail assistant, aligning technical decisions with the Valio-Aimo challenge brief.
- Architected a **React** + **TypeScript** + **Vite** frontend with route-based screens and a **FastAPI** backend with modular routers for booking, checkout, chat, and image validation.
- Integrated Groq-backed LLM flows for AI substitute recommendations and customer-service chat, improving the end-user support experience.

- Coordinated full-stack containerization with **Docker Compose**, enabling one-command startup and smooth demo delivery during judging.
- Facilitated team communication and unblocked teammates on integration issues, keeping the project on track across parallel workstreams.

Tech stacks: XGBoost, LangChain, FastAPI, React, TypeScript, MySQL, Docker

E-commerce Platform - Full-Stack MERN Application

May 2026 - August 2026

- Developed a full-stack e-commerce platform on the **MERN** stack (**MongoDB, Express.js, React.js, Node.js**), exposing **25+** REST endpoints across auth, products, cart, orders, and users.
- Designed **MongoDB** schemas with **Mongoose** for users, products, carts, orders, and product reviews.
- Implemented **JWT authentication** with **bcryptjs** hashing, including register, login, and protected GET /me routes.
- Managed **Context API** state for auth and a server-backed cart, with protected client-side routing via **React Router**.
- Built the complete order lifecycle - create, order history, mark paid/delivered, and cancel - plus an admin panel for product and user management.
- Containerized the stack with **Docker Compose** (MongoDB 7.0, backend, frontend), including a production config with multi-stage builds and Nginx.

Tech stacks: MongoDB, Express.js, React.js, Node.js, Mongoose, JWT, Docker, Nginx

Peace - Live stream viewer reaction system

Feb 2026 - April 2026

- Architected a decoupled, distributed backend of five containerized services communicating asynchronously over **RabbitMQ**.
- Built a **Node.js** emote generator and an analytics service that aggregates raw emote streams into meaningful moments against configurable thresholds, republishing them to a second exchange.
- Developed a real-time service that subscribes to both exchanges and broadcasts events to clients over **WebSockets**.
- Exposed a **REST API** for runtime configuration of analysis parameters, and built a **React** + **Vite SPA** rendering live emotes and aggregated moments with zero-refresh updates.
- Configured **Nginx** to reverse proxy /api/ and upgrade /ws/ traffic, then containerized the full stack with **Docker Compose** on an isolated network.

Tech stacks: Node.js, RabbitMQ, WebSockets, React.js, Vite, Nginx, Docker

TECHNICAL SKILLS

- **Languages:** Java, HTML5, CSS3, JavaScript, TypeScript, Python, SQL, C++
- **Frontend:** React, TailwindCSS, JavaFX
- **Backend:** Node.js, Express, GraphQL, Flask, FastAPI
- **Databases:** MongoDB, PostgreSQL, MySQL
- **DevOps & Tools:** Docker, Git, Azure, RabbitMQ, Kubernetes, Kafka, Nginx, GCP, CSC
- **Testing:** Chai, Mocha, Jest, ESLint
- **ML:** Numpy, Pandas, Matplotlib, Tensorflow, Scikit-learn
